

Voltage & Waterproof Standard Guide

This guide helps buyers prepare basic project information before quotation.

Voltage: confirm destination market, plug type, power supply and local installation requirements.

Waterproof reference: IP44 is often used for protected outdoor or indoor seasonal decoration.

For exposed outdoor street, plaza or facade projects, IP65-level product design may be recommended.

Final configuration should follow project environment, local rules and installation method.

Share project photos, dimensions and country information for a more accurate recommendation.
